

Figure S2. Pairwise Translation-related iModulon comparison between *S. albidoflavus* and *E. coli*, related to Figure 2. Gene weight correlation of the Translation iModulons of *S. albidoflavus* and *E. coli*. The dashed lines indicate the threshold values for the two iModulons. Genes highlighted in red and labelled, depict genes that are present in both the *S. albidoflavus* and the *E. coli* iModulons based on bidirectional BLAST results. These results indicate that these two iModulons are very similar to each other.
