

Supplementary Figure 2. Pairwise Translation-related iModulon comparison between S. albidoflavus and E. coli. Gene weight correlation of the Translation iModulons of S. albidoflavus and E. coli. The dashed lines indicate the threshold values for the two iModulons. Genes highlighted in red and labelled depict genes that are present in both the S. albidoflavus and the E. coli iModulons based on bidirectional BLAST results. These results indicate that these two iModulons are very similar to eachother.
